

FILTRATION - VOLUME 2(1)

The Nutsche filter comes of age
P. Miller

Filter media selection, science or black art?
E. Hardman

Design considerations of needlefelts used for air filtration applications
G. Clark

Improved abrasion resistant coatings for industrial filtration applications
R. Allen and R. Lydon

Star flow profile ceramic membranes
R. White and C. Murton

Baghouse filter performance studied by numerical simulations
M.G. Frey, A. Jensen, K. Dam-Johansen and S. Rasmussen

Simulation of the motion of particles settling towards a vibrating filter medium
R.J. Wakeman, P. Wu and M.A. Koenders

Flux enhancement by gas-liquid two phase flow for crossflow microfiltration in a tubular ceramic membrane
P. Mikulášek and P. Pospíšil

Influence of on and off times of power application on electroosmotic dewatering under intermittent electric field
H. Yoshida, K. Tanaka and M. Komatsu

FILTRATION - VOLUME 2(2)

Air filtration using glass filter media
A. Willis

Use of Tetratex ePTFE membrane laminates in fine particle filtration
A. Gibson

Electrostatically charged air filter media

J. Mills

Activated carbon media and its application in compressed air

S. Smith

Low density ceramic filters for hot gas filtration

P. Hodgson

Filtration requirements and new filtration concepts for modern diesel injection systems

G-M. Klein, M. Durst and H. Banzhaf

Factors affecting the generation of electrostatic charge in automotive fuel filters

T.J. Ptak, A. Tondreau and M. Bryson

Biodegradable filters

T. Ciach

The cleaning and validation of components for the polymer industry and associated environmental responsibilities

C. Holden and G. Lomax

A novel mechanistic insight into the effect of surfactants on aviation fuel water coalescer performance

V. Hughes

Increasing solids residence times in tumbler centrifuges

R.J. Wakeman

Role of fractional cake composition in cake resistance

A. Yelshin, J.A. Teixeira, W.R. Bowen, and M. Mota

A flocculant testing method for practical application in a centrifugal field

M. Beiser, W. Stahl and A. Erk

FILTRATION - VOLUME 2(3)

Safety aspects of centrifuges

C. Grimwood

Applications of pervaporation and vapour permeation

E. Maus

Is it right to blame the centrifuge?

N. Day

A new high precision method of calibrating filters

G. Rideal and J. Storey

Multipurpose solutions incorporated into GMP peeler centrifuges

M. Riera

Latest developments in high speed disc stack separators

J. Hamatschek and P. Schöttler

An investigation into the fouling of fine bubble aeration diffusers in activated sludge

S. Cameron and C.J. Williams

Decanter process performance studies: flow patterns, sedimentation and solids handling

B. Madsen

The influence of an electrical field on filtration and washing

A. Ghirisan, K. Weber and W. Stahl

Hydrodynamics of dynamic membrane filters

M. Kuosa and J. Kallas

Characterisation of membrane fouling by streaming potential and flux measurements

S. Metsämuuronen and M. Nyström

Basic study of bubble formation in dissolved CO₂ gas flotation of waste activated sludge

M. El-Zahar, M. Salih and K. Fujisaki

The flow pattern in the dust outlet geometry of a gas cyclone and its effects on separation efficiency

S. Obermair, J. Woisetschläger and G. Staudinger

FILTRATION - VOLUME 2(4)

Comparison of techniques for electrode rapping in electrostatic precipitators

A. Strehlow and M. Schmoch

A new generation of ceramic membranes with excellent space and cost efficiency

K.-J. Schröder, T. Boger, K. Drury, G. Lachut and P. Makris

Purification of organic acids on combined nanofiltration and bipolar electrodialysis

F. Pedersen, B. Norddahl and S. Eriksen

Image analysis of sewage sludge flocs: The effect of flocculant molecular weight

S. Weir, J. S. Robinson and G. M. Moody

Pretreatment methods for membrane filtration

R.J. Wakeman

Airborne molecular contamination (AMC) control and the effect of filter media technical parameters

M. Middlebrooks and M. Baumgartner

Influence of an electric field on filtration in a filter press

K. Weber and W. Stahl

Surface force effects on filter cake characteristics

J. Dueck, D. Purevjav and Th. Neesse

Determination of solid hold up in jet filters from periodic continuous operational data

A. Kavouras and G. Krammer

Precipitation of submicron aerosol particles at high temperatures by electrostatic means

A. Schiel, A.P. Weber, M. Katzer and G. Kasper

Inertial deposition of aerosol particles in a model filter with dust loaded fibres

V.A. Kirsch

Experimental and CFD analysis of particle retention on different filter media in solid-liquid filtration

M. Rainer and W. Höflinger

FILTRATION - VOLUME 2(5)

Solid/liquid separation plant design - Equipment selection by computer software

E.S. Tarleton and R.J. Wakeman

Selection of centrifuges - Why big samples?

N. Pearson

Solid-liquid separation plant design - Vacuum filtration

A. Walker

Fibrous materials for ultrafine air purification

V.A. Goldade and A.G. Kravtsov

New gas filter using atomised ultrafreezing (FUA)

A. Macías-Machín, J. Umbría and A. Lecuona

A filtering screw conveyor press for finely dispersed sludges

D. Schlegel

A study of the separation of activated sludge

C. Meisl, A. Fuchs and G. Staudinger

Finite element modelling of concentration profiles in flow domains with porous walls

C.J. Richardson and V. Nassehi

Electrostatic precipitator efficiency in the fine particle regime

H.-J. Schmid and H. Umhauer

Surface chemistry and sorption properties of chemically modified carbon fibres from polymer blend precursor

A.P. Koscheev, A.E. Serzhantov and A.D. Shepelev
